RODOLFO BRAVO

SOFTWARE ENGINEER

I have 6 years of experience in web software development, creating solutions for public and private organizations. Specialized in **Full Stack** development, I focus on scalable applications and best practices. My experience includes extensive work with **React** and **Angular** for **front-end**, and **Express** and **Django** for **back-end** using services in cloud like **AWS**, **Google Cloud** and **Firebase**. Additionally, I adapt quickly to new technologies in both **front-end** and **back-end** to maintain modern and efficient solutions.

WORK EXPERIENCE

Full Stack Software Developer - Boss Laboratories Feb 2024 - Current

Develop and maintain web applications using **angular** and **ASP.NET8** Core with firebase service.

- Developed an e-commerce web application for the sale of shoe insoles for the company. It was developed in **Angular** and **ASP.NET8** using **firebase** services.
- I maintained their internal web application developed in **Angular**, resolving bugs and implementing new functionalities that the client required.

Software Developer - Freelancer Jul 2021 - Feb 2024

Developed responsive web applications utilizing the **MERN** and **NET** Stack for diverse clients, ensuring user-friendly interfaces and seamless experiences.

- I worked on a project predicting house values based on features and amenities, implementing the prediction algorithm in **ASP CORE NET** to create a **web API** that received parameters from the front end using **Next.js**.
- I developed a **web API** and a **web application** for FONATUR to digitize the documents used for the construction of the Mayan train using **express.js** and **react**
- Developed a **web API** for SECTUR responsible for the registration, digitization, and creation of certificates for tourist places in Mexico, handling requests to view records from a mobile app and web app, using security techniques like JSON Web Token (JWT) with **.NET8** and **Django**.

Software Developer - SOFTTEK, Oct 2022 - Feb 2024

The main activities design and development of web applications, API's, database and service testing; my achievements:

- I implemented new functionalities in Banorte applications such as file manager, data consumption APIs and visualization of updates developed with **React**, **Angular**, **Express** and **NET8**.
- Design and development of user interfaces using **React**, **Angular**, **Redux**, **Tailwind**, **Bootstrap**, **Fontawesome**.
- API development to save data and algorithm using **express**, **ASP.NET8**, **Django** and **Flask**.
- Provide support and maintenance to applications that are in production that are developed with **Django** and **ASP.NET8**.

Project Engineer- ECON TECH, Feb 2019 - Sep 2022

The main activities include research, UI design, database structure development, and the creation of web and desktop applications, primarily using **React** and **NET**. My achievements include:

- Developed and designed the Front End for historical signal monitoring: Utilized **React** for creating a dynamic and responsive user interface.
- Created a Web API for material prediction using the KNN algorithm: Implemented with **Django**, leveraging its ORM and view-based architecture for efficient data handling.
- Developed and designed an inventory system for a warehouse: Used **React** for the Front End and **ASP CORE NET** for the Back End, ensuring a seamless and secure data flow.
- Collaborated on the development and design of an ANDON system for alarm calls and attention: Employed **React** for an interactive interface and **ASP.NET8** for the system logic, ensuring effective user-system communication.

HARD SKILLS

- Python, Javascript, C# and Java.
- HTML and CSS.
- Bootstrap and Tailwind.
- React, Angular and Nextjs.
- Express, Nestjs, Flask, Django and .NET8
- MySQL, MSSQL, oracle, Mongo DB.
- Git, Github and Git-flow for version control.
- Docker and Docker Compose.
- kanban and scrum methodologies
- AWS, Google Cloud and Firebase

CERTIFICATES

- Front End Development in FreeCodeCamp
- Git y Github in Platzi.
- POO and algorithms in python in Platzi.
- Docker in Udemy
- Microservices architecture in Udemy

LANGUAGES

- Native Spanish
- English level B1.
